Class: LY IT Core

Lab Assignment No.: 6

Create your own cloud on your device.

ownCloud:

ownCloud is a popular open-source software platform that provides a self-hosted file sync and share solution. It enables users and organizations to create their own private cloud storage and collaboration environment. With ownCloud, you can store, sync, and share files, documents, photos, and other data securely while retaining control over your data and the server on which it's hosted.

Key features of ownCloud include:

1. **File Synchronization:** Users can synchronize files across devices, ensuring that the latest version of a file is accessible from any device with ownCloud installed.
2. **Data Security:** ownCloud offers data encryption at rest and in transit to protect sensitive information. You can control who has access to your data and what permissions they have.
3. **Collaboration:** ownCloud supports document editing and real-time collaboration, making it a platform for team collaboration and file sharing.
4. **Customization:** ownCloud is highly customizable, allowing users to tailor the platform to their specific needs and requirements.

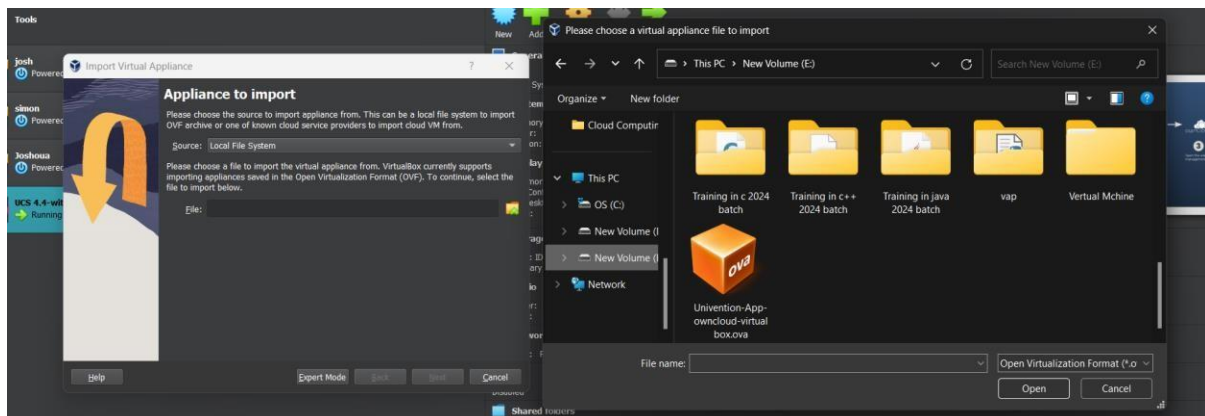

Overall, ownCloud provides individuals and organizations with the flexibility to create their own secure cloud storage and collaboration solutions, ensuring data privacy and control while enabling seamless access to files and collaboration tools.

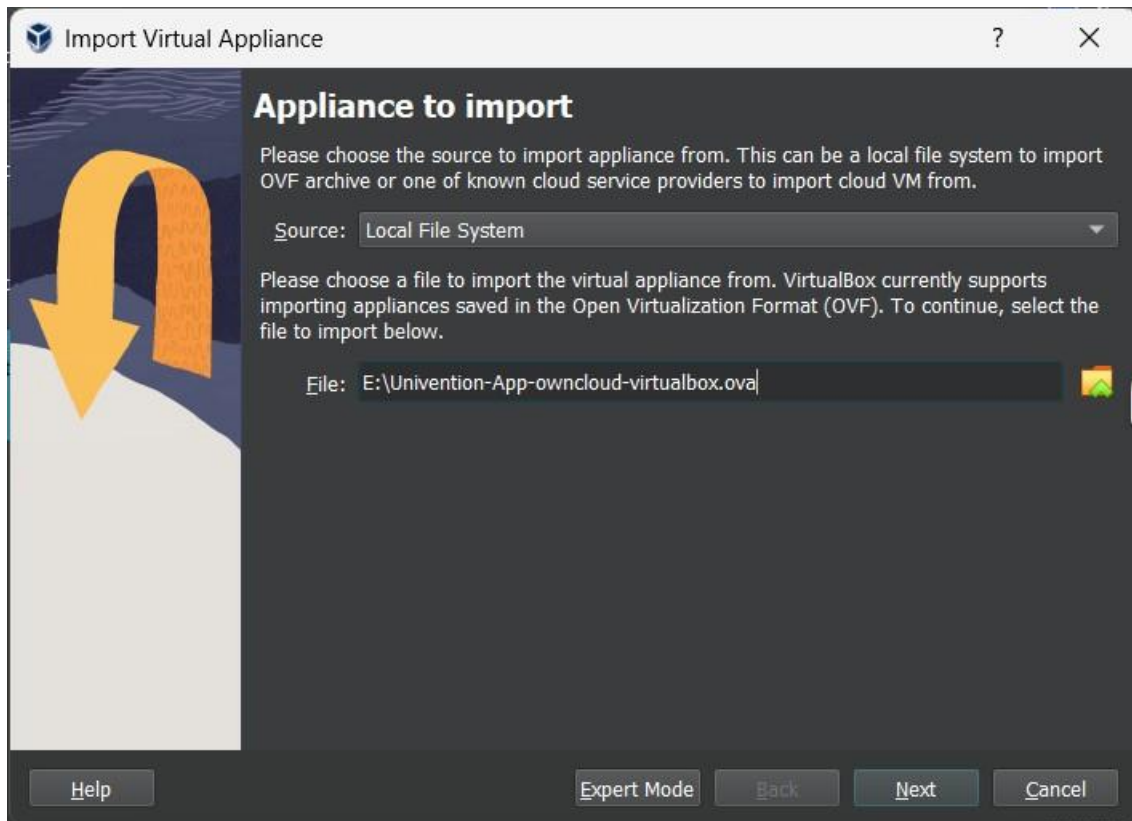

Steps:

1. Download ownCloud Appliance: <https://owncloud.com/download-server/>
2. Launch Virtual Box after appliance is installed on the system and import the ownCloud appliance

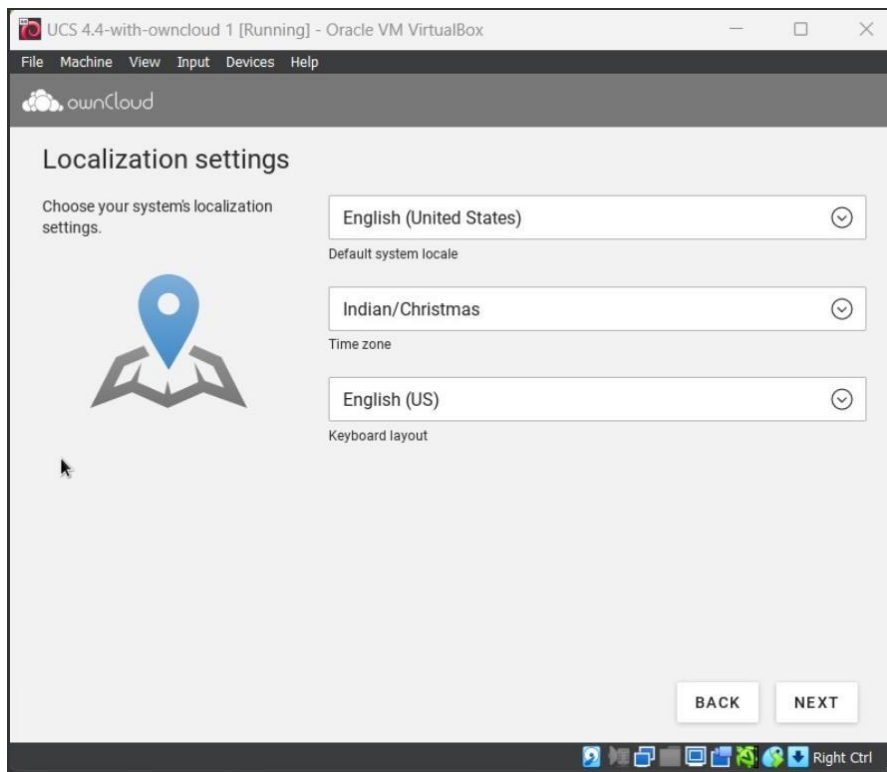

3. Select OVA file of ownCloud which we have downloaded and click “open”

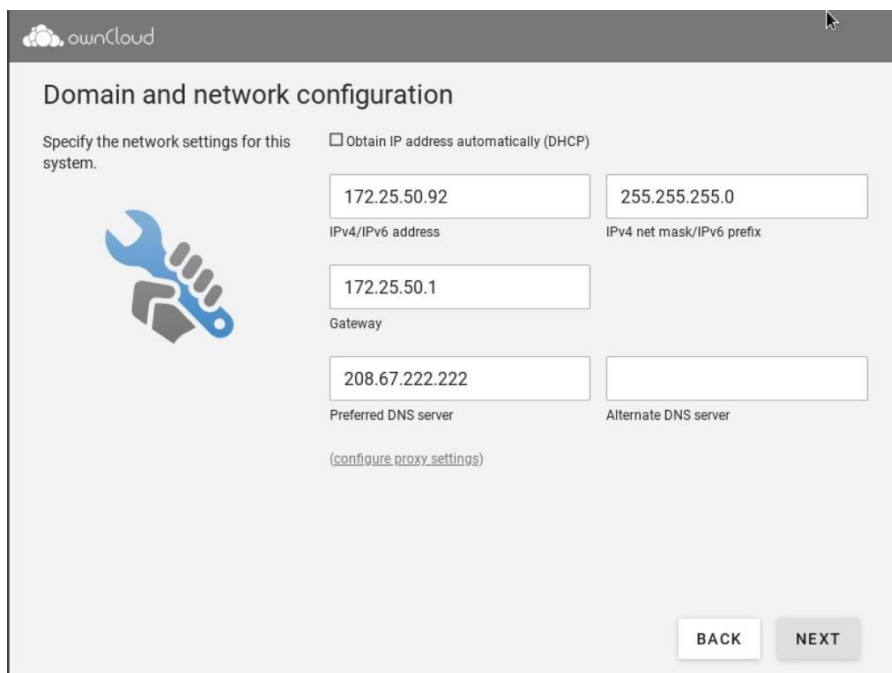

4. Click "Import" to begin the import process. This may take some time, depending on your system's performance and the size of the appliance.
5. Click the "Start" button boot VM
6. Set up ownCloud: After the virtual machine has booted, you'll need to follow the on-screen instructions to set up your ownCloud instance. This typically involves configuring the database, admin user, and other settings.
7. Once the setup is complete, open a web browser on your host machine and enter the IP address or hostname of the ownCloud virtual machine to access the ownCloud web interface.

## 8. Setup location and time zone

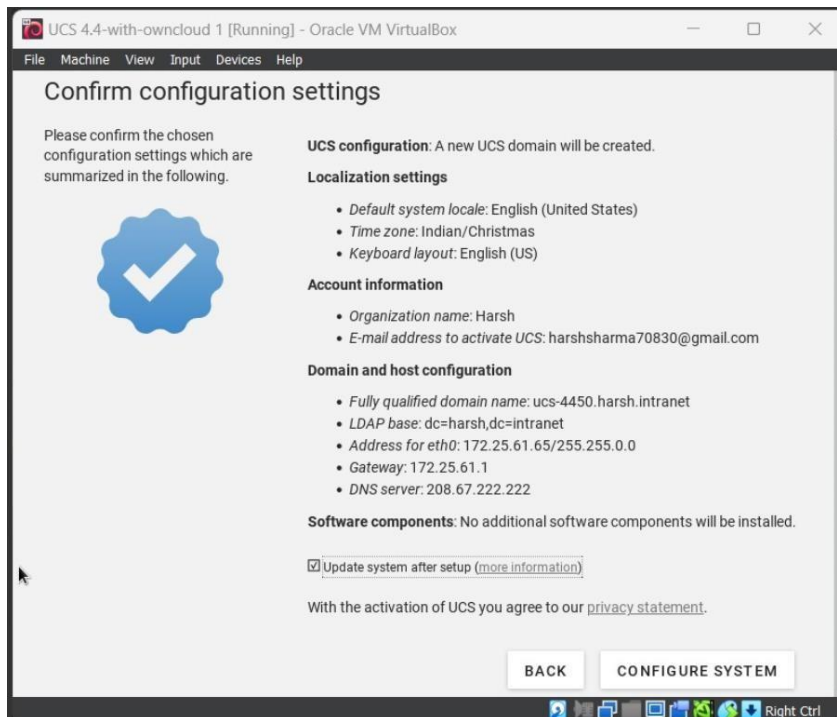

The screenshot shows the 'ownCloud' installation window titled 'UCS 4.4-with-owncloud 1 [Running] - Oracle VM VirtualBox'. The 'Localization settings' screen prompts the user to 'Choose your system's localization settings.' It features a map icon on the left. On the right, there are three dropdown menus: 'Default system locale' set to 'English (United States)', 'Time zone' set to 'Indian/Christmas', and 'Keyboard layout' set to 'English (US)'. At the bottom right are 'BACK' and 'NEXT' buttons. The bottom of the window shows a taskbar with various icons and a 'Right Ctrl' label.

## 9. Setup network configurations

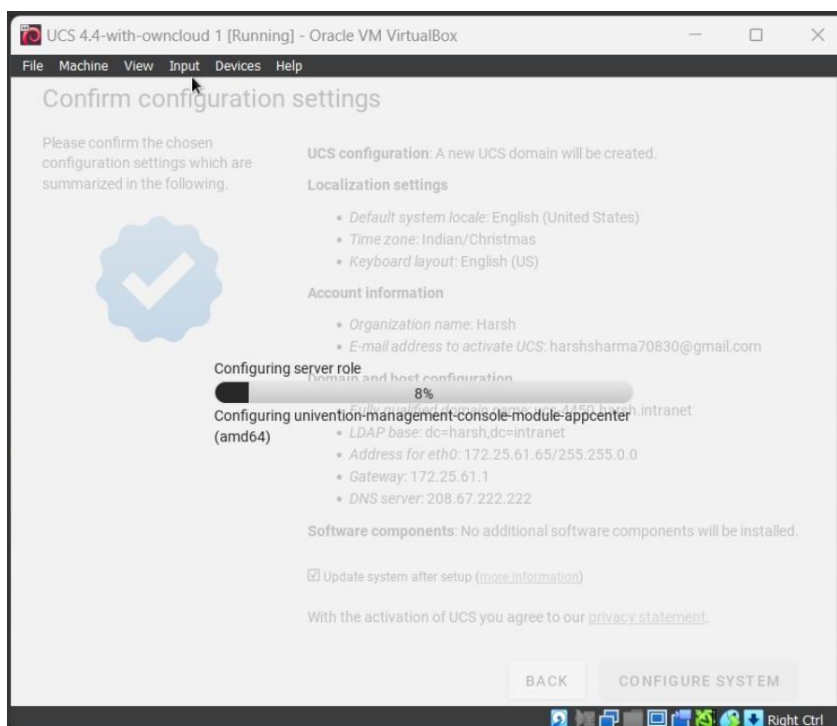

The screenshot shows the 'ownCloud' installation window with the 'Domain and network configuration' screen. It prompts the user to 'Specify the network settings for this system.' and includes a wrench and gear icon. A checkbox 'Obtain IP address automatically (DHCP)' is present and unchecked. Below it are several input fields: 'IPv4/IPv6 address' (172.25.50.92), 'IPv4 net mask/IPv6 prefix' (255.255.255.0), 'Gateway' (172.25.50.1), 'Preferred DNS server' (208.67.222.222), and 'Alternate DNS server' (empty). A link '(configure proxy settings)' is at the bottom left. 'BACK' and 'NEXT' buttons are at the bottom right.

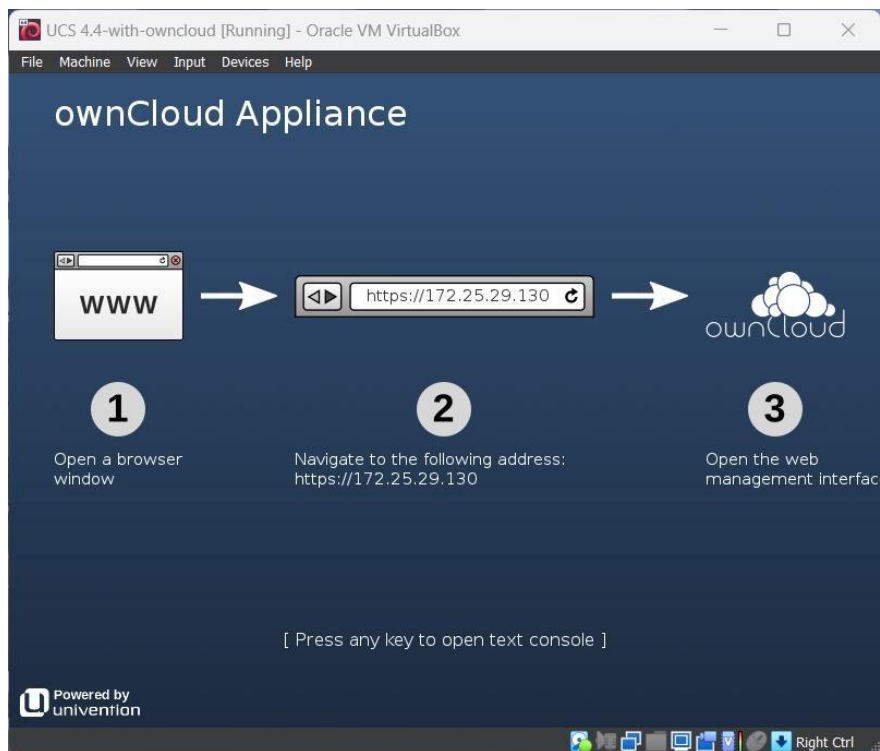

10. Enter account details such as your name, email and password and confirm the configuration settings

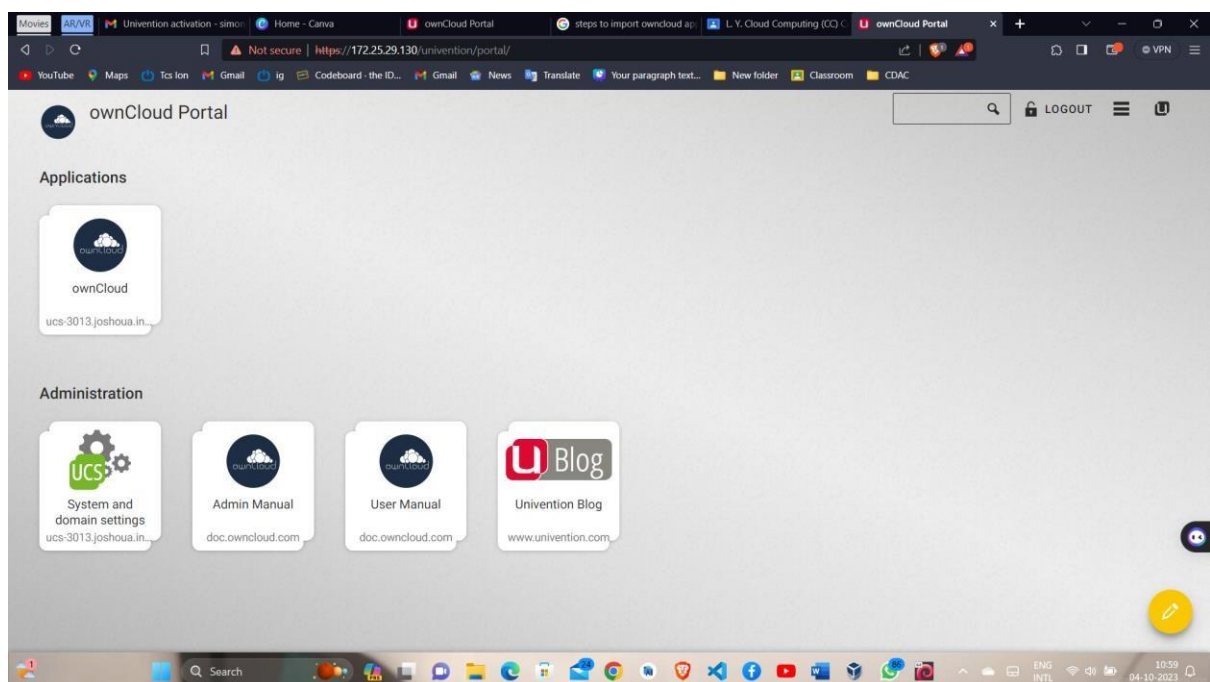

11. Click on configure system

12. Login using your credentials which you used while setup and now you can use ownCloud for managing and accessing your files.

13. Open the URL given on the above screen this will redirect your to your ownCloud homepage

Conclusion:

That's it! You've successfully imported the ownCloud appliance into VirtualBox and can start using it for your file and data management needs.
